The application in your hands, I concluded that it is bad for several criteria, including:

1. Typeface and brand, the color is not well used

2. Inappropriate text style

3. `Leading` No space was used between the start of the screen and the box

4. line length It is not appropriate in the box. The title must have two words with a maximum of three words

5. `Space` Not available for spaces, it's compact

6. Hierarchy In the interfaces, when you enter an interface, there is no return button to the original interface or the interface used before it must have two or three interfaces at most to return

7. `Alignment` It should be used to make the text appear elegant

8. The first interface when ads It has no limits, border or stroke to give it an acceptable look and relax the eye

9. A distinctive font must be used for the title that differs from the normal text in order to be distinguished, and the text should not be repeated throughout item because it's boring

10.   *And the space between line and line to be neater and clearer*

The application Sound cloud look nice and comfortable for several reasons :

1. The color and type of font is comfortable for the eye
2. Leading Spaces between start and content and between each line are appropriately spaced

3. The Line length of the font is suitable, the title is distinguished, the text is normal, and there is no more than one type, it is comfortable

4. Hierarchy In the interfaces, when you enter an interface, there is return button to the original interface or the interface used before it must have two or three interfaces at most to return

5. It makes great use of alignment for text
6. He's using images instead of long text
7. The icons are also used to show what their function is and the buttons
